Abstract: When I first started managing UNIX systems, I underestimated the amount of time I would spend managing disk space. Traditional UNIX operating systems let you divide disks into 8 or 16 partitions (also called slices). When a slice becomes full, you must either move data to another slice or repartition the disk to make that slice larger. Repartitioning is time-consuming because you must back up the disk, repartition it by modifying the disk label, and restore data as necessary. Logical volume technology provides the ability to reserve disk space that can be added to slices as needed. You can increase the size of a slice on-the-fly without losing data or experiencing significant downtime. The examples shown are for an HP-UX 10.20 system, where the set of commands used to manage logical volumes and volume groups is referred to as the Logical Volume Manager (LVM). The concepts also apply to other systems, such as AIX, that support logical volumes. (0 Refs)

Komplettes, aktenfreies Management einer nuklearmedizinischen Klinik

Abstract:
Ein Projekt zur Erstellung eines kompletten aktenfreien Managementsystemes (Schema hierzu) mit Hilfe eines PC-Netzwerkes an der Kieler Universitaetsklinik fuer Nuklearmedizin wird beschrieben. Nachdem ein Patient in der Abteilung erscheint, werden im Anmelderaum die Stammdaten, wie Name, Geburtsdatum, Krankenkasse etc. in eine Eingabemaske des Computerprogramms MacDoc (Mac Software Design, Muenster) zum Patientenmanagement eingetragen bzw. von der Krankenversichertenkarte eingelesen und in einem Patientendatensatz gespeichert. Zudem wird die Art und Menge des verwendeten Radionuklids aufgenommen. Ein im Hintergrund laufendes Programm schickt einen Teil der Patientendaten gemaess einer Wartezimmer-Zuordnung zu den Akquisitionsrechnern, um hier eine erneute Handeingabe zu vermeiden, und liefert Daten fuer ein Kurzbefundformular auf einem Befundungs-Macintoshrechner und kann dort manuell ergaenzt werden. Szintigramme und Sonographiebilder werden akquiriert, Dokumente eingescannt usw. Die Dokumente gelangen in ein Verzeichnis auf dem jeweiligen Computer auf das das Archivierungsprogramm ueber das Netz zugreift. Die verschiedenen Dokumente werden auf den Festplatten des digitalen Archivs gespeichert und an ihrem Ursprungsort geloescht. Auf Schreibcomputern werden Arztbriefe geschrieben und wie die Kurzbefunde archiviert. Zur Zeit etwa 2000 bis 2500 digitale Dokumente je Monat. Die Daten werden zunaechst auf Archivplatten gesammelt und etwa alle 60 Tage auf CD gebrannt. Aus Gruenden der Datensicherheit werden jeweils zwei CDs sowie ein Backup auf DAT-Kassette mit identischem Inhalt hergestellt. Zu jedem Archivdokument gehoert eine Verweisung in einer Datenbank, die permanent auf einer Festplatte verfuegbar ist. Da eine Verweisung mitsamt seiner Indexstruktur nur

etwa 200 Byte beansprucht laesst auch die Kapazitaet einer PC-Festplatte die Verwaltung von praktisch beliebig vielen Archivdokumenten zu.
